

**Generalized pre-Mississippian to lower Triassic stratigraphy in the northeastern Brooks Range, including the Carboniferous Lisburne Group. Wahoo data is from the Sadlerochit and Shublik Mountains and Fourth Range (Watts et al., 1995). Wachsmuth and Alapah data is from this study. Figure was modified from Watts et al., 1995.**

**Outcrop photo illustrating lithostratigraphic units and large-scale weathering patterns of the Lisburne Group from the eastern Porcupine Lake area.**
